

**BI 408/508 – Ocean Acidification  
Summer 2017**

**Instructions:** Please circle the number that best reflects your reaction to the following statements. Numbers are coded as follows:

- |                    |                                |
|--------------------|--------------------------------|
| 5 - Strongly Agree | 2 - Disagree                   |
| 4 - Agree          | 1 - Strongly Disagree          |
| 3 - Somewhat Agree | NA - No opinion/not applicable |

**Material presented in lectures has helped me to be able to:**

- 1) Identify environmental drivers that influence organismal responses to ocean acidification

**5                      4                      3                      2                      1                      NA**

- 2) Explain the basic underlying chemistry that drives changes in seawater pH

**5                      4                      3                      2                      1                      NA**

- 3) Compare and contrast ecological and evolutionary advantages of invertebrate adaptations in the context of ocean acidification

**5                      4                      3                      2                      1                      NA**

- 4) Evaluate recent research on ocean acidification

**5                      4                      3                      2                      1                      NA**

**Group discussions and projects have helped me to be able to:**

- 5) Identify environmental drivers that influence organismal responses to ocean acidification

**5                      4                      3                      2                      1                      NA**

- 6) Explain the basic underlying chemistry that drives changes in seawater pH

**5                      4                      3                      2                      1                      NA**

- 7) Compare and contrast ecological and evolutionary advantages of invertebrate adaptations in the context of ocean acidification

**5                      4                      3                      2                      1                      NA**

8) Evaluate recent research on ocean acidification

5                      4                      3                      2                      1                      NA

**Outreach project helped me to be able to:**

9) Identify environmental drivers that influence organismal responses to ocean acidification

5                      4                      3                      2                      1                      NA

10) Explain the basic underlying chemistry that drives changes in seawater pH

5                      4                      3                      2                      1                      NA

11) Compare and contrast ecological and evolutionary advantages of invertebrate adaptations in the context of ocean acidification

5                      4                      3                      2                      1                      NA

12) Evaluate recent research on ocean acidification

5                      4                      3                      2                      1                      NA
